

CASE STUDY: **Greenside Golf Buggy Track**

Project: Provision of greenside, porous, flexible surfacing buggy track
Client: Warrington Golf Club
Procurement: By Invitation
Location: Warrington, Cheshire
Date Undertaken: October, 2017

PROJECT OUTLINE:

The client required a recycled, porous surfacing material to be laid to overcome issues with wet and boggy areas between the green and teeing area. This project required working in co-ordination with internal green staff who had prepared the sub base.

*Nu-phalt Contracting invited to deliver a nu-flex project for Warrington Golf Club in Cheshire.
Another very happy client.*

The Client:
The client is delighted with the finished outcome and the positive comments received from club members.

PROJECT OUTCOMES:

The project was a complete success and, to the delight of the course manager, demonstrated extremely well how the porosity and drainage properties of nu-flex can deal with wet areas.

BENEFITS:

The asset manager and end-users alike have welcomed a number of benefits including;

- Well drained surface due to porosity of the material
- Resistance to slipping due to the type of materials used
- Significant reduction in the effects of ice and snow
- Excellent durability for buggy use
- Innovative recycled material
