Safe the Date:

7.-8. october 2021

YSF session at the
annual meeting of the
DGBM

- 2:00 p.m. Welcome and introduction
of the YSF**
- 2:10 p.m. Interactive workshop with
Dr. Katherina Ulbrich**

"Who is doing a PhD has to write a lot. However, scientific writing often turns out to be a major challenge for PhD students. How can

you manage your PhD writing process in a way that you will be able to produce high-quality scientific texts within the given time? This workshop offers theoretical input on scientific writing processes and strategies as well as the opportunity to practice some writing techniques. Participants are invited to reflect on their individual writing habits (and if necessary get some ideas on how to modify them) with the aim to establish productive writing routines in the long-term. Citation modes, literature management, formatting and layout-related issues as well as the proof-reading of scientific texts are not part of this workshop."

- 3:15 p.m. “Dos and Don’ts while
thesis writing”**
- 3:35 p.m. open panel discussion**
