

## Grass cutting and weed removal at Kelly Lake Treatment plant

Grass cutting in Blue circled area approximately 7 acres

- Grass to be maintained below 8"
- Grass does not need to be maintained as lawn quality
- Trimming around all piping, also maintained to below 8"

- During the dry season grass around plant will dry up but discharge area will not so spot mowing will be required
- There are steep banks but not so steep that it can't be mowed with equipment
- Use of contractor's equipment for all mowing

## **Recirculating sand filter maintenance**

This is the area circled in red approximately 1.14 acres.

- All weeds need to be cleaned out of this area
- All effort can be made to do this with equipment but hand pulling or hoeing of weeds will be required
- Area to be worked with sanitary district supplied tractor
  - Ability to run tractor a must
  - Dragging
  - Hauling weeds to offsite dump site
- Small rototiller (supplied by district) also will be used to work tight against piping

## **Plant Operators Notes**

- Plant operators will be switching flow piping weekly on the seepage bed so different areas will be wet from week to week.
- Recirculating sand filter is changed less frequently and will need to work around intermittent discharge.
- Notice this is septage water for treatment so protective gear is required supplied by contractors.
- Every effort should be made not to come in contact with water
- Plant operators can coordinate with contractor to move the discharge around to help with this.
- This will be a contract position. Company will need their own insurance.
- Approximate hours per year 159
